***elegans* Swaine** 1916b: 182. Holotype ♀; Hood River, Oregon [USA]; CNCI, Ottawa.

Distribution: North America (British Columbia in Canada/ California, Idaho, Oregon, Washington in USA).

Hosts: *Abies concolor, A. grandis, A. magnifica,* rare in other conifers, restricted to *Pseudotsuga menziesii* in N Idaho.

Notes: (1) Swaine (1916b: 182) clearly described the female and on p. 183 cites the type. For this reason, Bright's (1967b: 677) designation of a lectotype for this species was not necessary.

Notes: (1) Eichhoff (1878: 312) states that this taxon is near *dactyliperda* (probably a synonym). Since there is only one known endemic American species of this genus, because the description fits *dactyliperda*, and the type is lost, it is placed in synonymy under that species.

Genus *Premnobius* Eichhoff

PREMNOBIUS EICHHOFF 1878b: 65, 404. Type-species: *Premnobius cavipennis* Eichhoff, monobasic.
Premnophilus Browne 1962g: 79. Type-species: *Xyleborus joveri* Schedl =*Premnobius quadrispinosus* Schedl, original designation. Synonymy: Schedl 1964j: 52.
References: (**tx**) Browne 1962g: 79; Schedl 1963j: 480, 1964j: 52.

Keys: Wood 1982b: 756 for American species.

Notes: (1) Although contrary to the letter of the Code, but consistent with the spirit of stability in nomenclature, the following departure from traditional taxonomic practice is followed here. In Schedl 1957d, the universally recognized genus *Premnobius* was made a junior synonym of *Xyleborus* thereby creating eight homonyms. Browne 1961d strenuously objected to that action and restored all of these junior homonyms to validity in *Premnobius*. At that time, 1957, the old code of nomenclature had been suspended, and the new code did not become effective until 1960. Because Schedl's action was not in the best interests of the science of nomenclature, and since it was strenuously objected to by Browne and was not supported or condoned by anyone except Schedl, the pre-1957 names are retained here, as was done by Browne 1961d, even though a strict interpretation of Code article 59d had a starting date of 1960.

***xanthopus* (Eichhoff)** 1868c: 151 (*Xyleborus*). Holotype ♀; Africa (Cap bonae spei); Hamburg Museum, lost.

Figures: Nunberg 1963b:pl. 31, figs. 4–7, Schedl 1962j: 212, 1977b: 145.

Distribution: Africa (Ivory Coast/ Kenya/ Natal/ Nigeria/ South Africa/ Tanzania/ Uganda/ Zaire), Asia (Burma/ Assam, Tamil Nadu in India/ Malaya/ Sri Lanka), Fiji Islands, Indonesia (Borneo, Java, Mentawei, Sumatra), Madagascar, Philippine Islands (Luzon, Mindanao).

Hosts: Schedl 1962j: 212–219 lists 73 host species for Africa. *Antidesma petiolare*, *Arthrophyllum diversifolium*, *Artocarpus integrifolia*, *A. scortechinii*, *Canarium* sp., *Cussonia chartacea*, *C. vantsilana*, *Delonix regia*, *Dombeya* sp., *Dyera costulata*, *Eugenia* sp., *Fanchera* sp., *Ficus soroceoides* var. *macrophlebia*, *F.* sp., *Gouania glandulosa*, *Hibiscus macrophyllus*, *Maesa lanceolata*, *Mangifera indica*, *Pachytrape dimep-*

Notes: (3) The *xanthopus* of Schedl is a shining example of *semirudis*; in general, African specimens are shining, whereas most Asian specimens have the elytral declivity partly or entirely dull. However, they probably represent the same species. Dejean 1837: 382 (used *xanthopus* as a nomen nudum in *Bostrichus*), Eggers 1920: 124, 1922: 174, Schedl 1962j: 212 (*siginis* Hagedorn, nomen nudum, synonymy). It is probable that *Xyleborus semipolitus* Schedl is a synonym (SLW).
